

Amira Okafor

Forward Deployment Engineer | Customer-facing AI systems

Lagos, Nigeria | amira.okafor.demo@example.test | +234 000 000 0000

PROFILE

Forward Deployment Engineer with seven years of experience translating ambiguous customer needs into useful, reliable software. I combine technical delivery with product thinking: mapping field workflows, prototyping better operator experiences, shipping secure integrations, and measuring adoption. I am applying to Ruhu because its mission needs a builder who can move comfortably between customer conversations and production systems.

SELECTED IMPACT

- Owns field discovery through launch: stakeholder interviews, workflow mapping, technical design, integration delivery, enablement, and adoption measurement.
- Turns field evidence into journey maps, service blueprints, and Figma prototypes that align customers, product managers, and engineers before a build begins.
- Designs evidence-first operator experiences with role-based access, audit events, and explicit human approval for consequential actions.
- Comfortable with Python, TypeScript, REST APIs, SQL, Google Cloud, Figma, analytics, and technical enablement.

EXPERIENCE

Northstar Systems

2023 - Present

Senior Forward Deployment Engineer

Lagos / Hybrid

Led end-to-end deployments with operations teams in regulated and high-volume environments. Ran discovery interviews and workflow shadowing; turned evidence into service blueprints and Figma prototypes before an approval-gated integration was built. Created launch criteria, run receipts, recovery playbooks, and enablement materials for customer teams.

Fieldline Cloud

2020 - 2023

Implementation Engineer

Remote

Delivered API and data-import integrations for growth-stage teams; owned discovery, configuration, launch readiness, and post-launch adoption analysis. Built operator dashboards and lightweight design systems that made complex workflows easier to understand, measure, and use.

EDUCATION AND WORKING STYLE

B.Sc. Computer Science, University of Lagos. I work with a bias toward evidence, clear owner decisions, small reversible steps, and written operating context. I value privacy-aware implementation and can explain technical and design trade-offs to non-technical stakeholders.

WHY THIS ROLE

Ruhu needs a practical bridge between customer reality and product execution. I would begin by listening to the first design partners, identifying repeated operational friction, and turning the evidence into an explicit, measurable deployment plan.
